**Statewide Data & Reporting System RFP**

**11/30/22 Update**

<u>Summary</u>

The Delaware Department of Education has posted an RFP seeking professional services to purchase a statewide data and reporting system that will provide a formative and summative assessment system, integrate data from state and external vendor systems, and allow for the analysis of data via a data dashboard that brings all information about students into one place for the purpose of needs-based data-driven decision making regarding the whole child.

<u>Key System Intents and Details</u>

**Multi-tenant, Tiered, Formative & Summative Assessment System**

The Data & Reporting System must include a formative and summative assessment application that allows for the creation, dissemination, and implementation of formative and summative assessments. The system must be reliable and highly available with the ability to add organizations and increase capacity.

**Interoperability, Data Flow Architecture, Data Integrations, & Data Entry**

The Data & Reporting System must incorporate data integrations with state and LEA systems and external vendors and must also include a data entry solution. The solution must utilize open interoperability standards provided by 1EdTech, the Ed-Fi Alliance, and Common Education Data Standards.

**Data Dashboard**

The Data & Reporting System must include an interactive and dynamic data dashboard including alignment to academic and non-academic standards, data and assessment item analysis, and reporting and visual representations of data. These requirements must be automated and incorporate the ability for user design and generation.

**Implementation, Communication, & Support**

The Data & Reporting System must include a detailed implementation and communication plan. The plan must minimally include system buildout, technical training, professional development, coaching, levels of support during initial implementation, ongoing support, and a tiered communication plan.

<u>RFP Status</u>

RFP to be awarded in 2023.
